 @ysblades.official

For all figure skaters aiming for the top

With almost a hundred years of metal processing experience,  
we can manufacture blades that truly connect the skaters to the ice

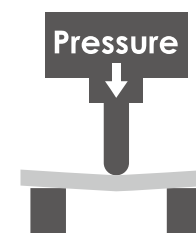

## Flexible and Strong Material

We conducted rigorous testing to find the best metal that is both flexible to better resist bending and impacts but also highly durable

### Flexibility Comparison Test

By applying pressure to the metal piece in the same direction, we tested how flexible our material is compared to the material used for traditional models

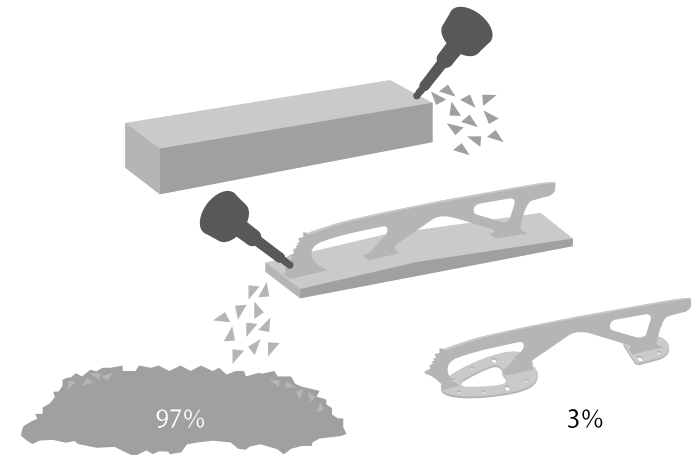

**Bent up to 99°  
without breaking**

Traditional  
models

**Immediate  
breakage**

**Three times stronger than the traditional model**

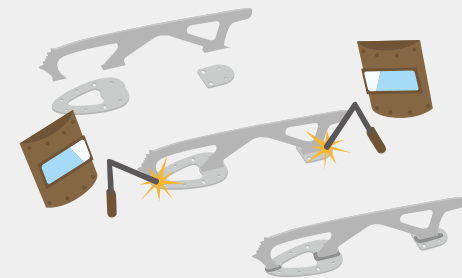

The finished product only weighs about 280 g (less than 10 oz), about 3% of the original block

## Crafting Blades without Welding

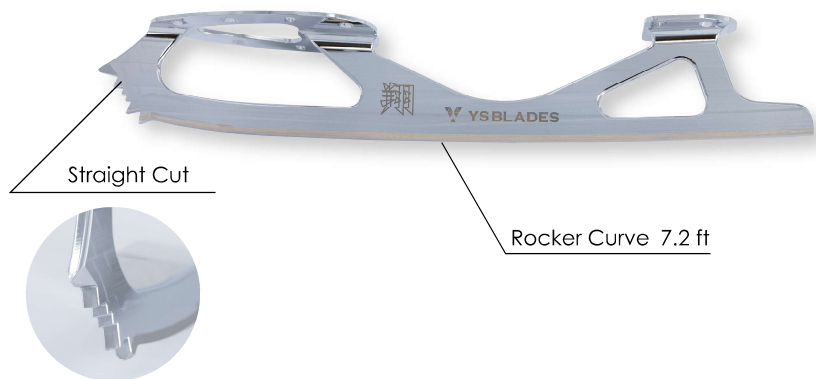

Our blades are carved from a single block of steel weighing about 10 kg (22 lbs)

The traditional models often suffer from inconsistencies among each product and a lack of durability due to the welding of three separate components

With our century-long experience specializing in steel and advanced metal processing technology, we eliminate these issues and provide long-term and consistent support to skaters

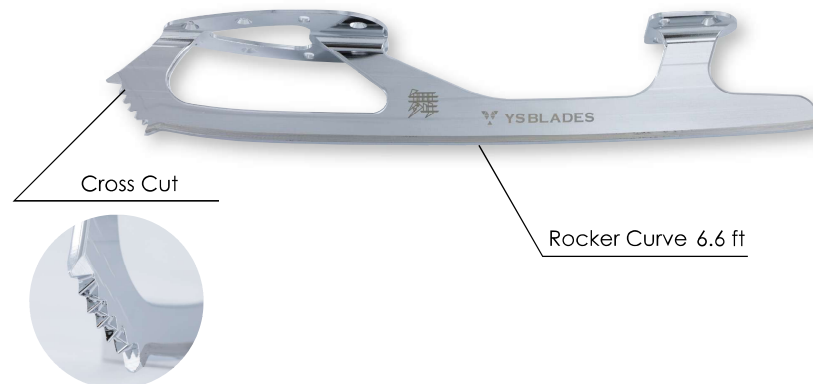

SHO

The SHO is our flagship model and the favorite choice among top figure skaters within the YS BLADES series. Like its name 翔, meaning to soar or fly, this blade unlocks skaters' full potential to perform marvelous triple and quadruple jumps with its large toe pick. Our signature arched stanchion design is engineered to be exceptionally lightweight, significantly reducing fatigue and enhancing performance.

#### Skill Level

Triple/Quadruple Jumps

MAI

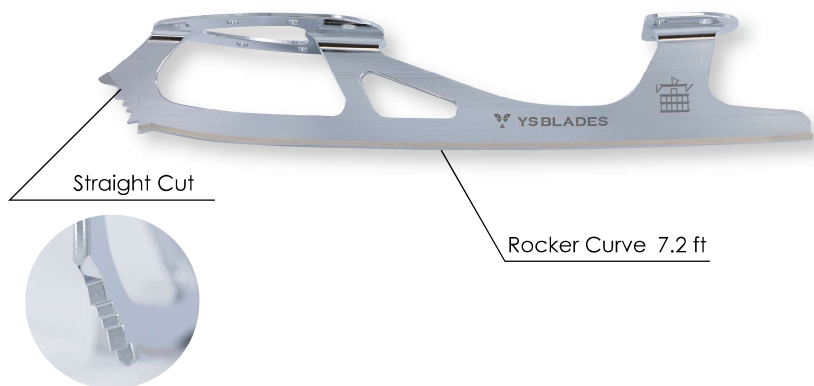

The MAI is one of our first models. 舞 is a type of traditional Japanese dance consisting of graceful spins. Like its name, these blades enables skaters to perform faster spins with its 6'6" rocker curve. The MAI also features a bigger toe with a cross-cut for exquisite toe jumps, and a simple shape to make the blades lightweight and easier to hold during spins.

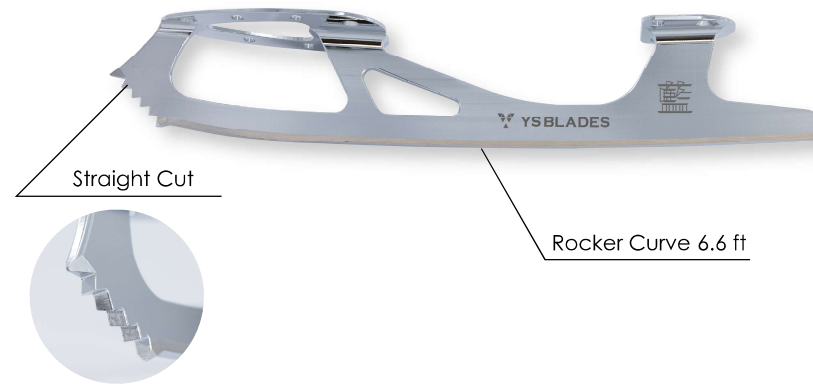

#### Skill Level

Triple/Quadruple Jumps

The SORA stands out as the top selling model within the YS BLADES series. It is designed to achieve stable landings after powerful and dynamic triple and quadruple jumps. Expertly crafted by our engineer, the original and iconic shape guarantees both exceptional lightweight performance and remarkable durability.

The AI is carefully designed with a bigger toe for a superior grip on ice, enabling skaters to execute dynamic and explosive jumps effortlessly. Additionally, the slightly longer edge ensures outstanding stability, allowing skaters to easily build up speed.

Triple/Quadruple Jumps

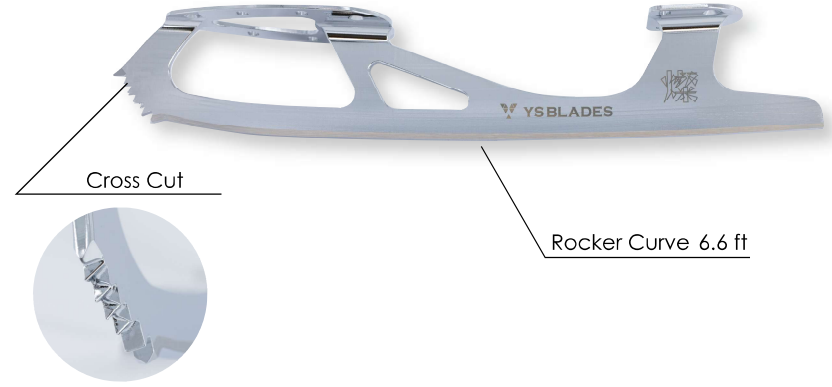

#### Skill Level

Triple/Quadruple Jumps

The MIYABI stands out with its longer and taller sizing compared with other models, delivering superior control for skaters during steps, spins, and jumps. It's cross-cut toe design ensures a secure grip on the ice, enabling swift and seamless rotations.

The SAN ( 燦 : "to shine brightly and beautifully") is for skaters craving extra enhancement in their spins. The taller edge provides deep edge work, and the cross-cut toe with double bottom toe picks provides superior grip but quick rotation on the ice.

Triple/Quadruple Jumps

The YUI is our very first model of blades for ice dancing and was crafted with the expertise of a skilled ice dance instructor. True to its name, 結 (meaning "to tie or bind something"), these blades strengthen the connection between partners like never before. With the refined toe pick, and the short and thin 3mm edge, YUI delivers seamless transitions from one edge to another, making movements smoother and more precise.
